

Chile:

Where Nature Goes to Extremes

by Nathan Sanchez

The country of Chile is a land of amazing **physical** extremes. You can see this in its shape, which looks like a ribbon. Chile is extremely long but very narrow. From its northern boundary with Peru to its southern tip at Cape Horn, Chile is 2,700 miles long. However, the country's average width is only 110 miles. At one point, Chile is only 9.6 miles wide!

The main idea is the most important point.

Definition ↓

▲ Chile, Land of Extremes
